1.0 INTRODUCTION

1.1 Background

1.1.1 This Preliminary Arboricultural Report was prepared for Southern Cross Care in relation to a Planning Proposal for Cardinal Gilroy Village, 45 Barcom Street, Merrylands. The purpose of this Report is to undertake a Visual Tree Assessment¹ (VTA), provide an overview of the quality and value of the trees within the site, determine Tree Protection Zone (TPZ) and Structural Root Zone (SRZ) areas in accordance with *Australian Standard 4970 Protection of Trees on Development Sites (2009)*, and provide arboricultural advice early in the planning stages of the project.

1.1.2 The Planning Proposal is to seek amendments to statutory development controls of the *Holroyd Local Environmental Plan (2013)* to facilitate a masterplan development that offers maximum yield. The amendments would be in respect to the following key development controls of the site:

- Maximum Height Control
- Maximum Floor Space Ratio Control
- Schedule 1 Additional Permitted Uses

1.1.3 In preparing this Report, the author has considered the objectives of *Cumberland Council Tree Management Controls*, *State Environmental Planning Policy Vegetation in Non-Rural Areas (2017)*, *Australian Standard 4970 Protection of Trees on Development Sites (2009)*, *Australian Standard 4373 Pruning of Amenity Trees (2007)*, *Australian Standard 2303 Tree Stock for Landscape Use (2015)* and *Safe Work Australia Guide for Managing Risks of Tree Trimming and Removal Work (2016)*.

Refer to Methodology (**Appendix 1**)

2.0 RESULTS

2.1 The Site

2.1.1 The site is an irregular-shaped allotment known as 45 Barcom Street, Merrylands West and is located within the Cumberland Council Local Government Area (former Holroyd Local Government Area (LGA)). The site is bound by Kenyons Road to the north, Merrylands High School playing fields to the south, a number of residential cul-de-sacs to the east and residential allotments and Cerdon College campus to the west.

2.1.2 The site comprises three (3) lots with a total area of 7.44ha including:

- Lot 5 DP 701151 (2.42ha)
- Lot 8 DP 732058 (1.928ha)
- Lot 11 DP 1075418 (3.092ha)

2.1.3 In general the site has a gentle slope with an easterly aspect. The site contains a mix of residential single-storey, double-storey and flat buildings which are set in landscaped grounds comprising turf and scattered vegetation including mature trees. The main vehicular access to the site is via Barcom Street connecting to a network of internal cul-de-sacs.

Refer to Tree Location Plans (**Appendix 2**)

¹ Mattheck & Breloer (2003)

2.2 The Trees

2.2.1 Two hundred and sixty-four (264) trees (and tree groups) were assessed using the Visual Tree Assessment² (VTA) criteria and notes, and comprise of a mix of locally indigenous, Australian native and exotic species. Sixty-seven (67) species are represented. Eight (8) trees are dead.

2.2.2 An additional fifty-four (54) trees have also been addressed in this Report with the majority located outside of the site. A full VTA of these trees was not undertaken due to limited access with species and trunk diameter measurement recorded for the purposes of determining Tree Protection Zone (TPZ) calculations only.

2.2.3 As required by Clause 2.3.2 of *Australian Standard 4970 Protection of Trees on Development Sites (2009)*, each of the trees assessed has been allocated a Retention Value. The Retention Value is based on the tree's Useful Life Expectancy and Landscape Significance with consideration to its health, structural condition and site suitability. The Retention Values do not consider any proposed development works and are not a schedule for tree retention or removal. The trees have been allocated one of the following Retention Values:

- Priority for Retention
- Consider for Retention
- Consider for Removal
- Priority for Removal

Refer to Tree Assessment Schedule (**Appendix 3**)

2.2.4 Trees 168, 169, 197 and 252 contain potentially significant structural defects. Internal diagnostic testing should be undertaken to determine the severity of these defects if the trees are to be retained. Internal diagnostic testing should be undertaken during the design development stage as potential tree removal may have implications for the design.

2.2.5 The species in Table 1 are listed as exempt species by *Cumberland Council Tree Management Controls*.³

2.2.6 Table 1: Exempt Species

Species	Tree Number
<i>Celtis sinensis</i> (Chinese Nettle Tree)	110, 136, 288, T & Z
<i>Celtis sinensis</i> (Chinese Nettle Tree)	A6, A7, A8, A9 & EN
<i>Olea europaea var. europaea</i> (European Olive)	(weed species within tree group species only)
<i>Cotoneaster</i> sp. (Cotoneaster)	212
<i>Eriobotrya japonica</i> (Loquat)	273
<i>Gleditsia triacanthos</i> cvs (Honey Locust cultivars)	135
<i>Ligustrum</i> spp. (Privet)	83, 333, AF & BZ
<i>Morus nigra</i> (Mulberry)	144 & EO
<i>Olea</i> spp. (Olive)	109, 111, 155, 202, 221, 222, 223, AC, AD, AG, AH, AI, AJ & AO
<i>Prunus</i> spp. (Plum)	118, 119, 127 & 334
<i>Syagrus romanzoffianum</i> (Cocos Palm)	112-116 & F

2.2.7 *Olea europaea* subsp. *cuspidata* African Olive (Trees 109, 111, 221, 222, 223, AC, AD, AG, AH, AI, AJ & AO) are subject to a *General Biosecurity Duty* and a *Regional Recommended Measure* by the Department of Primary Industries.⁴ *This species must not be traded, carried, grown or released into the environment.*

² Mattheck & Breloer (2003)

³ Cumberland Council (2018)

2.2.8 The trees listed in Table 2 are locally indigenous and representative tree species of the Cumberland Plain Woodland. Cumberland Plain Woodland is listed as a *Critically Endangered* ecological community under the NSW *Biodiversity Conservation Act (2016)* and the Commonwealth *Environment Protection and Biodiversity Conservation Act (1999)*.

2.2.9 Table 1: Cumberland Plain Woodland Species

Species	Tree Number
<i>Corymbia maculata</i> (Spotted Gum)	145, 147 & CB
<i>Eucalyptus crebra</i> (Narrow Leaf Ironbark)	176, 199, 201, 204-206, 210, 213, 214, DF, DG & O
<i>Eucalyptus moluccana</i> (Grey Box)	168, 169, 172-175, 178-183, 185-189, 197, 198, 200, 226, 231-233, 238, 239, 249, 252, 259, 328, A-C, CQ, CS, CT, CU, CW, CY, DA & DB
<i>Melaleuca decora</i> (White Feather Honeymyrtle)	125 & 301

2.2.10 Aerial images of the site from 1943 show a concentration of mature vegetation in the northern half of the site with small groups, rows and individual trees scattered throughout the southern half of the site.⁵ Mature specimens of *Eucalyptus crebra* (Narrow Leaf Ironbark) and *Eucalyptus moluccana* (Grey Box) were identified throughout the site with the highest concentration along the northern boundary. It is not possible to determine the exact age of these trees however the larger specimens are likely to predate 1943. The two (2) large *Melaleuca decora* (White Feather Honeymyrtle) identified as Trees 125 and 301 can be clearly identified as mature specimens in this aerial imagery. The large size of the trees in 1943 may suggest that Trees 125 and 301 are remnant vegetation or early plantings associated with European colonisation.

2.2.11 *Eucalyptus scoparia* Wallangarra White Gum (Trees 159 & 211) is listed as *Endangered* under the NSW *Biodiversity Conservation Act (2016)* and *Vulnerable* under the Commonwealth *Environment Protection and Biodiversity Conservation Act (1999)*. *Eucalyptus nicholii* Narrow Leaf Peppermint (Tree DP) is listed as *Vulnerable* under the NSW *Biodiversity Conservation Act (2016)* and the Commonwealth *Environment Protection and Biodiversity Conservation Act (1999)*.⁶ However, these trees are planted specimens and are not a component of a locally indigenous vegetation community. No other individual threatened tree species listed within the BioNet Atlas of NSW Wildlife Database for the area were identified during the field investigations of the site.

2.2.12 The ecological and cultural significance of the subject trees has not been assessed and is beyond the scope of this Report.

3.0 TREES & DEVELOPMENT

3.1 Australian Standard 4970 Protection of Tree on Development Sites (2009)

3.1.1 *Australian Standard 4970 Protection of Trees on Development Sites 2009* (AS-4970) describes the best practices for the planning and protection of trees on development sites. The procedures described are based on plant biology and current best practices as covered in recently published literature. AS-4970 outlines that a Tree Protection Zone (TPZ) is the principal means of protecting trees on development sites. It is an area isolated from construction disturbance so that the tree remains viable.⁷

⁴ Department of Primary Industries (2017)

⁵ NSW Government Spatial Services (2016)

⁶ NSW Office of Environment and Heritage (2011)

- 3.1.2 The TPZ is calculated as a radial measurement based on twelve (12) times the tree's Diameter at Breast Height (DBH).⁸ For palms, other monocots, cycads and tree ferns, the TPZ should not be less than 1m outside the crown projection.⁹ These formulas are based on extensive research and are generally accepted within the arboricultural industry as being suitable for calculating areas designed to maintain the long-term viability of trees on development sites. AS-4970 caps the TPZ at a radius of 15m.
- 3.1.3 AS-4970 also provides calculations to determine a tree's Structural Root Zone (SRZ). The SRZ is described in AS-4970 as the area around the base of a tree required for the tree's stability in the ground. This zone considers a tree's structural stability only, not the root zone required for its vigor and long-term viability, which will usually be a much larger area. Severance of structural roots within the SRZ is generally not recommended as it may lead to the destabilisation and/or decline of the tree.
- 3.1.4 The TPZ and SRZ of the trees have been calculated in accordance with the AS-4970 and are outlined in the Tree Assessment Schedule (**Appendix 3**).
- 3.1.5 Ideally, works should be avoided within the TPZ. A *Minor Encroachment* is less than 10% of the TPZ and is outside the SRZ. A *Minor Encroachment* is considered acceptable by AS-4970 when it is compensated for elsewhere and contiguous within the TPZ. A *Major Encroachment* is greater than 10% of the TPZ or inside the SRZ. *Major Encroachments* generally require root investigations undertaken by non-destructive methods or the use of tree sensitive construction methods.
- 3.1.6 AS-4970 outlines that the TPZ may need to be modified (extended) to provide additional protection to the above ground parts of the tree. Where conflict between branches and structures/machinery could occur, branches should be protected with padding and timber battens, temporarily tied back or in some cases pruned, only where pruning would not impact the tree's health, structural condition, long-term viability or form.

3.2 Proposed Masterpan

- 3.2.1 The masterplan which forms part of the Planning Proposal has been reviewed to determine high level impacts on the trees.
- 3.2.2 The supplied plans show that twenty-six (26) trees which were allocated a Retention Value of either *Priority for Retention* or *Consider for Retention* are to be retained. The establishment of TPZ areas will be required for all trees to be retained within the site and adjoining the site. TPZ areas should be established to protect the trees (root system & crown) from indirect construction-related activities (e.g. soil compaction and contamination, and mechanical damage).
- 3.2.3 Where works are proposed within the TPZ areas of trees to be retained, design modifications and the use of tree sensitive construction methods should be utilised where the level of encroachment exceeds 10% of the TPZ area. Tree sensitive construction methods include the use of above grade pavements and slabs, and isolated piered footing to support buildings and structures.
- 3.2.4 New internal access roads are proposed around a large percentage of the perimeter of the site. Roads (including sub-base materials) within TPZ areas should be constructed above existing grade and constructed with minimal sub-base compaction.

⁸ Standards Australia (2009)

⁹ Standards Australia (2009)

- 3.2.5 Many of the trees proposed for retention are locally indigenous Eucalyptus species and may require higher levels of management to remove deadwood on a regular basis. The production of deadwood is a normal part of a tree's biological processes occurring even in trees which are in good health and vigour. The volume and frequency of deadwood development is likely to increase where trees are subject to physiological stresses (such as development works). Therefore, the requirement to manage deadwood and the associated risk must be actively managed, particularly in areas with high value targets.
- 3.2.6 *Eucalyptus moluccana* (Grey Box) is the dominant locally indigenous species represented at the site. Outbreaks of Grey Box Psyllid (*Cardiaspina* sp.) have caused large scale necrosis and defoliation of *Eucalyptus moluccana* (Grey Box) in Western Sydney within the last decade.¹⁰ This phenomenon is associated with the removal of understory planting and a reduction in Grey Box Psyllid predators. A well-structured understory of locally indigenous shrubs (particularly *Bursaria spinosa* Native Blackthorn) and ground covers is likely to promote tree health over the long term by providing habitat for wildlife which can help to control pest species.
- 3.2.7 The underplanting of large trees can also be as useful strategy in restricting public access to areas beneath tree canopies where deadwood and other structural defects are present. Such strategies can significantly reduce tree management costs over their lifetime and should be considered in the landscape design for the site.
- 3.2.8 An Arboricultural Impact Assessment and Tree Protection Plan should be prepared when detailed Development Applications plans are available to examine the potential impact of the proposed works on the trees. The report should also detail the proposed design and construction methods, and tree protection measures to minimise impacts on the trees.

3.3 Tree Replacement

- 3.3.1 The removal of trees with a low Landscape Significance and with short Useful Life Expectancies creates an opportunity for new planting. In general, when trees with low to moderate Landscape Significance are removed, the resultant loss of amenity can be replaced within a short to medium timeframe by the replanting of new advanced-size trees. It is essential that replacement trees are of high quality and installed and maintained in accordance with industry best practice, so they provide maximum benefits over their lifetime whilst minimising maintenance costs. New tree planting should be grown in accordance with *Australian Standard 2303 Tree Stock for Landscape Use (2015)*.
- 3.3.2 With staged projects, tree removals and new/replacement tree planting should be undertaken as part of each stage. This spreads tree removal and replacement over a longer time frame allowing new trees time to establish and thereby minimising the impact of tree removals on the amenity of the site between stages.
- 3.3.3 With consideration to maintaining the genetic integrity of locally indigenous species, a percentage of replacement trees should be representative species of the Cumberland Plain Woodland grown from seed of local provenance to the site.

¹⁰ Ridgeway (2013)

4.0 SUMMARY & CONCLUSION

- 4.1 Three hundred and twenty (320) trees (and tree groups) were addressed within this Report and comprise of a mix of locally indigenous, Australian-native and exotic species. The mature specimens of *Eucalyptus crebra* (Narrow Leaf Ironbark), *Eucalyptus moluccana* (Grey Box) and *Melaleuca decora* (White Feather Honey myrtle) are likely to predate 1943. A large number of the trees within the are considered environmental weed species and are exempt from Council's tree management controls. Of the two hundred and sixty-four (264) trees which were assessed;
- Twenty-one (21) trees (8%) have been allocated a Retention Value of *Priority for Retention*. These are Trees 47, 125, 173, 174, 179, 181, 198, 199, 205, 206, 231-233, 238, 249, 252, 263, 270, 301, 328 and 332.
 - One hundred and four (104) trees (39%) have been allocated a Retention Value of *Consider for Retention*. These are Trees 45, 46, 49, 52, 55, 56, 59-81, 89, 94, 96, 117, 120, 128, 130, 135, 149, 150, 152, 157, 163, 168, 169, 172, 175, 176, 180, 182, 183, 185, 186, 188, 189, 197, 201, 204, 207, 209-211, 213, 214, 229, 234, 239-242, 244, 245, 247, 248, 250, 264, 275-277, 281-283, 287, 292, 297, 300, 302-304, 308, 317, 319, 320, 331, A3, BT, BU, BV, BX, CG, CH, CI, CK, EP, ET and V.
 - One hundred and five (105) trees (40%) have been allocated a Retention Value of *Consider for Removal*. These are Trees 3, 48, 82, 84, 88, 92, 97, 99, 108-116, 131-133, 136, 151, 154, 155, 164-166, 167, 170, 171, 184, 190-194, 196, 200, 202, 203, 208, 212, 215, 217, 218, 224, 225, 228, 235, 236, 246, 251, 253-256, 260, 265, 266, 268, 269, 273, 278, 280, 284, 286, 289-291, 293-296, 298, 299, 305-307, 309-315, 321-326, 329, 330, A5, AK, AL, AU, BS, CF, D, DO, ED, EO, F and H.
 - Thirty-four (34) trees (13%) have been allocated a Retention Value of *Priority for Removal*. These are Trees 87, 98, 118, 119, 126, 127, 134, 137, 140, 144, 159, 160, 162, 178, 187, 195, 219-223, 226, 227, 237, 243, 259, 285, 288, 333, 334, AF, BZ, DC and U.
- 4.2 The trees allocated a Retention Value of *Priority for Removal* are in poor health and/or structural condition with a Useful Life Expectancy of less than 5 years. These trees should be removed irrespective of future development works.
- 4.3 The Planning Proposal is to seek amendments to statutory development controls of the *Holroyd Local Environmental Plan (2013)* to facilitate a masterplan development that offers maximum yield. The supplied plans show that twenty-six (26) trees allocated a Retention Value of either *Priority for Retention* or *Consider for Retention* are proposed for retention.
- 4.4 An Arboricultural Impact Assessment and Tree Protection Plan should be prepared when detailed Development Applications plans are available to examine the potential impact of the proposed works on the trees. The report should also detail the proposed design and construction methods, and tree protection measures to minimise impacts on the trees.
- 4.5 Replacement tree planting should be provided to help the loss of amity and canopy cover due to tree removal. New tree planting should be grown in accordance with *Australian Standard 2303 Tree Stock for Landscape Use (2015)*.

5.0 LIMITATIONS & DISCLAIMER

TreeiQ takes care to obtain information from reliable sources. However, TreeiQ can neither guarantee nor be responsible for the accuracy of information provided by others. Plans, diagrams, graphs and photographs in this Arboricultural Report are visual aids only and are not necessarily to scale. This Report provides recommendations relating to tree management only. Advice should be sought from appropriately qualified consultants regarding design/construction/ecological/heritage etc issues.

This Report has been prepared for exclusive use by the client. This Report shall not be used by others or for any other reason outside its intended target or without the prior written consent of TreeiQ. Unauthorised alteration or separate use of any section of the Report invalidates the Report.

Many factors may contribute to tree failure and cannot always be predicted. TreeiQ takes care to accurately assess tree health and structural condition. However, a tree's internal structural condition may not always correlate to visible external indicators. There is no warranty or guarantee, expressed or implied that problems or deficiencies regarding the trees or site may not arise in the future. Information contained in this report covers only the trees assessed and reflects the condition of the trees at the time of inspection. Additional information regarding the methodology used in the preparation of this Report is attached as Appendix 1. A comprehensive tree risk assessment and management plan for the trees is beyond the scope of this Report.

Reference should be made to any relevant legislation including Tree Management Controls. All recommendations contained within this Report are subject to approval from the relevant Consent Authority.

This Report is based on Standards Australia Ltd copyrighted material that is distributed by SAI Global Ltd on Standards Australia Ltd's behalf. It may be reproduced and modified in accordance with the terms of SAI Global Ltd's Licence 1110-c049 to TreeiQ ('the Licensee'). All amended, marked-up and licensed copies of this document must be obtained from the Licensee. Standards Australia Ltd's copyright material is not for resale, reproduction or distribution in whole or in part without written permission from SAI Global Ltd: tel +61 2 8206 6355 or copyright@saiglobal.com.

Appendix 1: Methodology

- 1.1 Site Inspection:** This report was determined as a result of a comprehensive site inspection during February 2019.
- 1.2 Visual Tree Assessment (VTA):** The subject tree(s) was assessed using the Visual Tree Assessment criteria and notes as described in *The Body Language of Trees – A Handbook for Failure Analysis*.¹¹ The inspection was limited to a visual examination of the subject tree(s) from ground level only. The inspection was limited to a visual examination of the subject tree(s) from ground level only. No internal diagnostic or tissue testing was undertaken as part of this assessment. Trees outside the subject site were assessed from the property boundaries only.
- 1.3 Tree Dimensions:** The dimensions of the subject tree(s) are approximate only.
- 1.4 Tree Locations:** The location of the subject tree(s) was determined from the supplied plans. Trees not shown on the supplied plans have been plotted in their **approximate location only**.
- 1.5 Trees & Development:** Tree Protection Zones, Tree Protection Measures and Sensitive Construction Methods for the subject tree were based on methods outlined in *Australian Standard 4970-2009 Protection of Trees on Development Sites*.
- The *Tree Protection Zone* (TPZ) is described in AS-4970 as a combination of the root area and crown area requiring protection. It is an area isolated from construction disturbance, so that the tree remains viable.
- The *Structural Root Zone* (SRZ) is described in AS-4970 as the area around the base of a tree required for the tree's stability in the ground. Severance of structural roots within the SRZ is not recommended as it may lead to the destabilisation and/or demise of the tree.
- In some cases it may be possible to encroach into or make variations to the theoretical TPZ. A *Minor Encroachment* is less than 10% of the area of the TPZ and is outside the SRZ. The area lost to this encroachment should be compensated for elsewhere and contiguous with the TPZ. A *Major Encroachment* is greater than 10% of the TPZ or inside the SRZ. In this situation the Project Arborist must demonstrate that the tree would remain viable. This may require root investigation by non-destructive methods or the use of sensitive construction methods.
- 1.6 Tree Health:** The health of the subject tree(s) was determined by assessing:
- I. Foliage size and colour
 - II. Pest and disease infestation
 - III. Extension growth
 - IV. Crown density
 - V. Deadwood size and volume
 - VI. Presence of epicormic growth
- 1.7 Tree Structural Condition:** The structural condition of the subject tree(s) was assessed by:
- I. Assessment of branching structure
(i.e co-dominant/bark inclusions, crossing branches, branch taper, terminal loading, previous branch failures)
 - II. Visible evidence of structural defects or instability
(i.e root plate movement, wounds, decay, cavities, fungal brackets, adaptive growth)
 - III. Evidence of previous pruning or physical damage
(root severance/damage, lopping, flush-cutting, lions tailing, mechanical damage)
- 1.8 Useful Life Expectancy (ULE):** The ULE is an estimate of the longevity of the subject tree(s) in its growing environment. The ULE is modified where necessary to take in consideration tree(s) health, structural condition and site suitability. The tree(s) has been allocated one of the following ULE categories (Modified from Barrell, 2001):
- I. 40 years +
 - II. 15-40 years
 - III. 5-15 years
 - IV. Less than 5 years

¹¹ Mattheck & Breloer (2003)

1.9 Landscape Significance: Landscape Significance was determined by assessing the combination of the cultural, environmental and aesthetic values of the subject tree(s). Whilst these values are subjective, a rating of high, moderate, low or insignificant has been allocated to the tree(s). This provides a relative value of the tree's Landscape Significance which may aid in determining its Retention Value. If the tree(s) can be categorized into more than one value, the higher value has been allocated.

Landscape Significance	Description
Very High	The subject tree is listed as a Heritage Item under the <i>Local Environmental Plan</i> with a local or state level of significance.
	The subject tree is listed on Council's Significant Tree Register or is considered to meet the criteria for significance assessment of trees and/or landscapes by a suitably qualified professional. The criteria are based on general principles outlined in the Burra Charter and on criteria from the Register of the National Estate.
High	The subject tree creates a 'sense of place' or is considered 'landmark' tree.
	The subject tree is of local, cultural or historical importance or is widely known.
	The subject tree forms part of the curtilage of a heritage item with a known or documented association with that item.
	The subject tree has been identified by a suitably qualified professional as a species scheduled as a Threatened or Vulnerable Species for the site defined under the provisions of the NSW <i>Biodiversity Conservation Act (2016)</i> or the Commonwealth <i>Environmental Protection and Biodiversity Conservation Act (1999)</i> .
	The subject tree is known to contain nesting hollows to a species scheduled as a Threatened or Vulnerable Species for the site as defined under the provisions of the NSW <i>Biodiversity Conservation Act (2016)</i> or the Commonwealth <i>Environmental Protection and Biodiversity Conservation Act (1999)</i> .
	The subject tree is an excellent representative of the species in terms of aesthetic value.
	The subject tree is of significant size, scale or makes a significant contribution to the canopy cover of the locality.
Moderate	The subject tree makes a positive contribution to the visual character or amenity of the area.
	The subject tree provides a specific function such as screening or minimising the scale of a building.
	The subject tree is a good representative of the species in terms of aesthetic value.
Low	The subject tree is a known environmental weed species or is exempt under the provisions of the local Council's Tree Management Controls
	The subject tree makes little or no contribution to the amenity of the locality.
	The subject tree is a poor representative of the species in terms of aesthetic value.

1.10 Retention Value: Retention Value was based on the subject tree's Useful Life Expectancy and Landscape Significance. The Retention Value was modified where necessary to take in consideration the subject tree's health, structural condition and site suitability. The subject tree(s) has been allocated one of the following Retention Values:

- I. Priority for Retention
- II. Consider for Retention
- III. Consider for Removal
- IV. Priority for Removal

ULE	Landscape Significance					
	Very High	High	Moderate	Low	Insignificant	
40 years +	Priority for Retention	Priority for Retention			Consider for Removal	Priority for Removal
15-40 years		Priority for Retention	Consider for Retention			
5-15 years		Consider for Retention				
Less than 5 years	Consider for Removal	Priority for Removal				

The above table has been modified from the Footprint Green Tree Significance and Retention Value Matrix.

CQ	<i>Eucalyptus moluccana</i> (Grey Box)	600					~500mm from boundary.					7.2	2.7

Tree No.	Species	DBH (mm)	Height (m)	Radial Crown Spread (m)	Health Rating	Structural Condition Rating	Comments	Age Class	ULE (years)	L/Sign	Retention Value	Radial TPZ (m)	Radial SRZ (m)
CR	<i>Melaleuca</i> sp. (Teatree)	50					Group of 3 trees.					2	1.5
CS	<i>Eucalyptus moluccana</i> (Grey Box)	700					~2.8m from boundary.					8.4	2.8
CT	<i>Eucalyptus moluccana</i> (Grey Box)	400					~2.8m from boundary.					4.8	2.3
CU	<i>Eucalyptus moluccana</i> (Grey Box)	700										8.4	2.8
CV	<i>Melaleuca stypheloides</i> (Prickly Leaf Paperbark)	200					~2.8m from boundary.					2.4	1.7
CW	<i>Eucalyptus moluccana</i> (Grey Box)	700					~5.6m from boundary.					8.4	2.8
CY	<i>Eucalyptus moluccana</i> (Grey Box)	300					~3m from boundary.					3.6	2
CZ	Removed.												
D	<i>Syzygium</i> sp. (Lillypilly)	150-150	4	2	Good	Good	Climber in crown.	Mature	15-40	Low	Consider for Removal	2	1.5

Tree No.	Species	DBH (mm)	Height (m)	Radial Crown Spread (m)	Health Rating	Structural Condition Rating	Comments	Age Class	ULE (years)	L/Sign	Retention Value	Radial TPZ (m)	Radial SRZ (m)
DA	<i>Eucalyptus moluccana</i> (Grey Box)	450					~5m from boundary.					5.4	2.4
DB	<i>Eucalyptus moluccana</i> (Grey Box)	500					~10m from boundary.					6	2.5
DC	<i>Callistemon viminalis</i> (Weeping Bottlebrush)	175 @ grade	1m	1	Good	Poor	Crown consists mainly of epicormic growth. Lopped with resultant epicormics.	Mature	<5	Low	Priority for Removal	2.1	1.6
DF	<i>Eucalyptus crebra</i> (Narrow Leaf Ironbark)	250										3	1.8
DG	<i>Eucalyptus crebra</i> (Narrow Leaf Ironbark)	325										3.9	2.1
DN	Removed.												
DO	<i>Schinus molle</i> var. <i>areira</i> (Peppercorn Tree)	150	3	3	Good	Good	Small (<25mmØ) epicormic growth in moderate volumes. Partially suppressed. Lopped.	Semi-mature	5-15	Low	Consider for Removal	2	1.5
DP	<i>Eucalyptus nicholii</i> (Narrow Leaf Peppermint)	500										6	2.5
ED	<i>Callistemon viminalis</i> (Weeping Bottlebrush)	200 @ grade	3	3	Good	Good		Mature	5-15	Low	Consider for Removal	2.4	1.7

Tree No.	Species	DBH (mm)	Height (m)	Radial Crown Spread (m)	Health Rating	Structural Condition Rating	Comments	Age Class	ULE (years)	L/Sign	Retention Value	Radial TPZ (m)	Radial SRZ (m)
EJ	<i>Corymbia citriodora</i> (Lemon-Scented Gum)	600										7.2	2.7
EN	<i>Olea europaea</i> var. <i>europaea</i> (European Olive) & <i>Celtis sinensis</i> (Chinese Nettle Tree)	150					Multiple individuals. Regrowth.					2	1.5
EO	<i>Morus nigra</i> (Mulberry)	250	6	5	Good	Fair	Crossing branches. Partially suppressed. Co-dominant inclusions, minor.	Mature	5-15	Low	Consider for Removal	3	1.8
EP	<i>Callistemon viminalis</i> (Weeping Bottlebrush)	300 @ grade	4	4	Good	Good		Mature	5-15	Moderate	Consider for Retention	3.6	2
EQ	<i>Liquidambar styraciflua</i> (Liquidambar)	550										6.6	2.6
ER	Removed.												
ES	Removed.												
ET	<i>Callistemon viminalis</i> (Weeping Bottlebrush)	150	4	2	Good	Good	Co-dominant inclusions, minor.	Mature	5-15	Moderate	Consider for Retention	2	1.5
F	<i>Syagrus romanzoffianum</i> (Cocos Palm)	300	8	4	Good	Good		Mature	5-15	Low	Consider for Removal	5	n/a

Tree No.	Species	DBH (mm)	Height (m)	Radial Crown Spread (m)	Health Rating	Structural Condition Rating	Comments	Age Class	ULE (years)	L/Sign	Retention Value	Radial TPZ (m)	Radial SRZ (m)
G	Removed.												
H	<i>Albizia julibrissin</i> (Silk Tree)	150	2	3	Good	Good	Wound(s), early signs of decay.	Semi-mature	5-15	Low	Consider for Removal	2	1.5
L	Removed.												
N	<i>Banksia integrifolia</i> (Coastal Banksia)	300 @ grade										3.6	2
O	<i>Eucalyptus crebra</i> (Narrow Leaf Ironbark)	600										7.2	2.7
Q	<i>Lagstroemia indica</i> (Crape Myrtle)	50										2	1.5
T	<i>Celtis sinensis</i> (Chinese Nettle Tree)	250										3	1.8
U	<i>Eucalyptus botryoides</i> (Bangalay)	500 300	16	8	Fair	Poor	Wound(s) with fungal brackets.	Mature	<5	Low	Priority for Removal	6.7	2.6
V	<i>Brachychiton acerifolius</i> (Illawarra Flame Tree)	250	8	4	Good	No access to base. Not rating.	Partially suppressed.	Semi-mature	5-15	Moderate	Consider for Retention	3	1.8

Tree No.	Species	DBH (mm)	Height (m)	Radial Crown Spread (m)	Health Rating	Structural Condition Rating	Comments	Age Class	ULE (years)	L/Sign	Retention Value	Radial TPZ (m)	Radial SRZ (m)
Y	<i>Phoenix canariensis</i> (Canary Island Date Palm)	400 @ grade										4	n/a
Z	<i>Celtis sinensis</i> (Chinese Nettle Tree)	224										2.7	1.8
